PROFILE

Computer Science graduate with three years of freelance experience designing and building web and mobile products. Comfortable working independently, managing client relationships, and taking projects from brief to launch. Strong background in React, Next.js, Flutter, and Node.js, with a genuine eye for design and a growing interest in creative web technologies including Three.js and WebGL. Eager to bring both technical skill and design thinking into a professional team environment.

EXPERIENCE

Freelance Web Designer & Developer | Self-Employed | 2022 – Present

- Designed and developed websites and web applications for clients across various industries.
- Completed a full website redesign for a Southern African consultancy firm — the largest project undertaken to date.
- Managed client communication, project scoping, timelines, and delivery independently.
- Built products using React, Next.js, Flutter, Firebase, and Node.js.

Computer Consultant | Intercom Computer Solutions | 08/2020 – 03/2021

- Provided technical support and consulting services to clients.
- Assisted with hardware and software troubleshooting and system setup.

PROJECTS

Southern African Consultancy Website Redesign — React, Next.js, Figma

Full redesign and rebuild of a consultancy firm's website. Handled design direction, frontend development, and client liaison from initial brief through to launch.

Water Cleanliness & Clearness Testing App — Dart, Firebase, Arduino

A mobile application connected to an Arduino-based sensor system that tests and logs water quality data in real time, storing results in Firebase for monitoring and reporting.

GBV Reporting App — Dart, Mapbox

A mobile application for reporting gender-based violence incidents, integrating Mapbox for location-based reporting and case mapping to support response coordination.

SmartBin — React, Firebase, Arduino

A smart waste management system combining an Arduino-based IoT bin sensor with a React dashboard and Firebase backend to monitor fill levels and optimize waste collection.

Waterborne Disease Outbreak Monitoring App — Dart, Mapbox, Gemini AI

A mobile application for tracking and visualizing waterborne disease outbreaks using Mapbox for geospatial mapping and Gemini AI for pattern analysis and early warning insights.

SKILLS

Languages

Frameworks & Libraries

Creative Web

Database & Backend

Design Tools

Hardware & IoT

Other

AI Tools

JavaScript, Python, Dart

React, Next.js, Flutter, Node.js

Three.js, WebGL (in progress)

Firebase, MySQL, Supabase

Figma, Blender 3D

Arduino, Embedded Systems

Git, Android Studio, Microsoft Office, CAD Software

Gemini AI, ChatGPT, Claude, Google Stitch, Genspark,

Namo Banana

EDUCATION

Bachelor of Computer Science | National Institute of Public Administration | 2021 – 2024

- Aggregate CGPA: 8.30
- Student Treasurer, ICTAZ NIPA Chapter
- Class Representative

High School Certificate | Rusangu Secondary School | 2012 – 2016

- Subjects: Science, Mathematics, English, Physics, Geography, Civic Education

LANGUAGES

English — Fluent
